DETAILED ACTION

Allowable Subject Matter

1. Claims 1-41, are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

The closest prior art shows the method of converting YCbCr into RGB but does not disclose a color signal processing device, comprising: a change rate detection unit detecting a change rate of a color difference signal when the color difference signal changes with hue and luminance remaining constant in a color space of the luminance color difference signal; a detection unit detecting the RGB color signal changing in a color space of the RGB color signal according to the changes of the color difference signal; and a color gamut decision unit determining a color chroma scope based on a change rate of the RGB color signal according to the change rate of the color difference signal when the detected RGB color signal exists on a color space boundary of the RGB color signal and displaying the color chroma scope on the display unit. The method simply process color signals without a memory storing color gamut coordinates values, in addition to preventing that converted color signals go beyond a displayable color gamut.
